

Zigbee config tool contains three functions:

1. Config the zigbee device through the RS232
2. Search all the device in the zigbee network
3. Upgrade the local device through the RS232

1. Open the com, click “**Load Params**”. Modify the paras , click “**Save Params**”, then “**Restart**” the device to enable the new params.

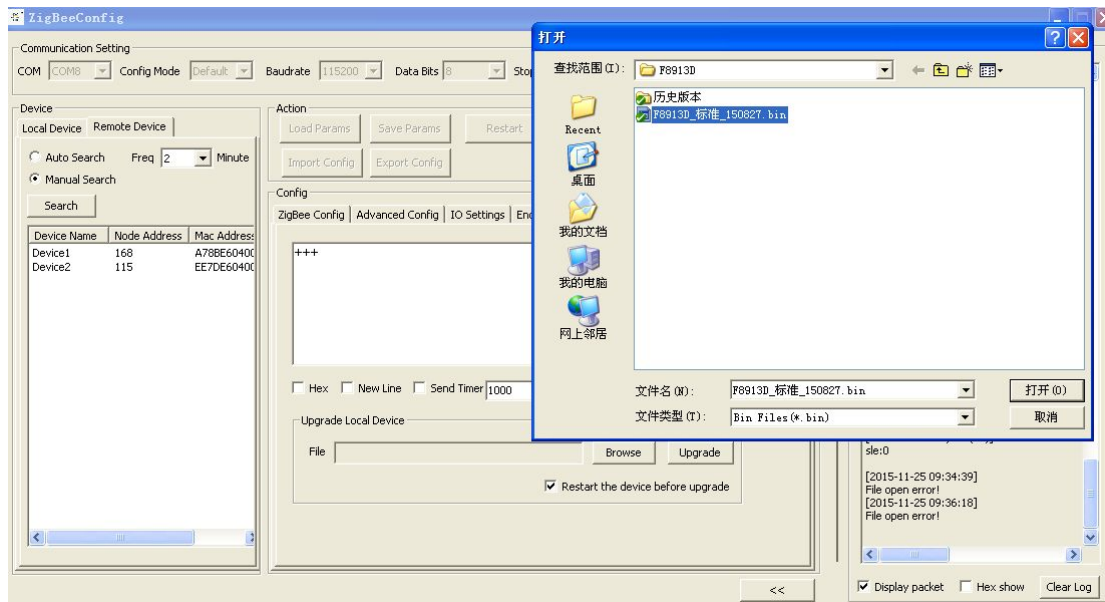

2. Click **Remote Device** on the left side, click the **Search** button, all the online zigbee device will show on the Device list except itself.

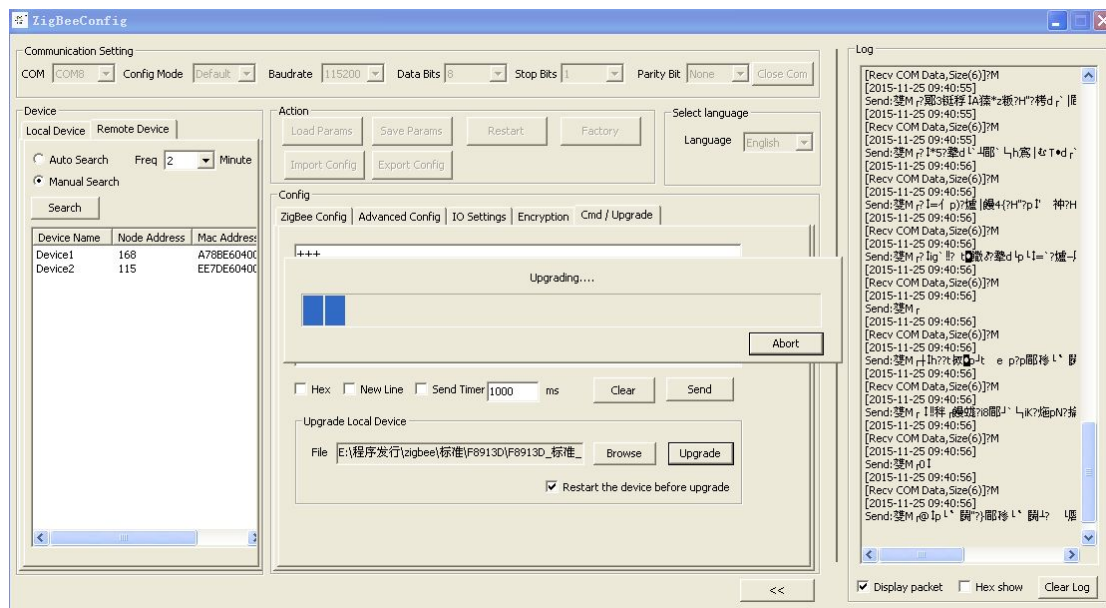

3. Upgrade the local device through the RS232

Click **Cmd/Upgrade**, **Browse** the bin file from PC, open the bin file.

click the “Upgrade”, then the zigbee device is upgrading...

Upgrade Success!
